01 / COMPANY OVERVIEW

Technology that moves business forward

SkyNetix Systems LLP is a technology services partner focused on software engineering, cloud-led transformation, data and AI.

OUR FOCUS

Design, build and evolve reliable software solutions — from backend platforms and integrations to cloud-native systems and AI-enabled experiences.

HOW WE ENGAGE

Project delivery, dedicated engineering capacity, specialist consulting, staff augmentation and subcontracting partnerships.

THREE TECHNOLOGY PILLARS

CLOUD

Architecture • Migration • Operations

DATA

Engineering • Analytics • Platforms

AI

GenAI • Automation • Applied ML

A practical partner from idea to implementation

Architecture thinking, hands-on engineering and delivery flexibility — aligned to your business priorities.

Architecture-led

Sound foundations, clear trade-offs and solutions designed for scale.

Engineering depth

Backend, APIs, integrations, data platforms and cloud-native application development.

Flexible capacity

Support for a defined project, specialist workstream or ongoing engineering needs.

Delivery mindset

Focus on maintainability, quality, security awareness and business outcomes.

End-to-End software and technology services

Capability areas can be combined to match your roadmap, delivery model and technical environment.

Custom software engineering

Enterprise applications, backend services, APIs, integrations and modernisation.

Cloud & DevOps

Cloud architecture, AWS / Azure / GCP, CI/CD, infrastructure as code and containers.

Data engineering & analytics

Data pipelines, data platforms, processing, reporting foundations and analytics.

AI & GenAI solutions

LLM integration, RAG, knowledge assistants and AI-enabled workflows.

Web & mobile development

Responsive web applications, frontend integration and cross-platform mobile solutions.

Technology consulting

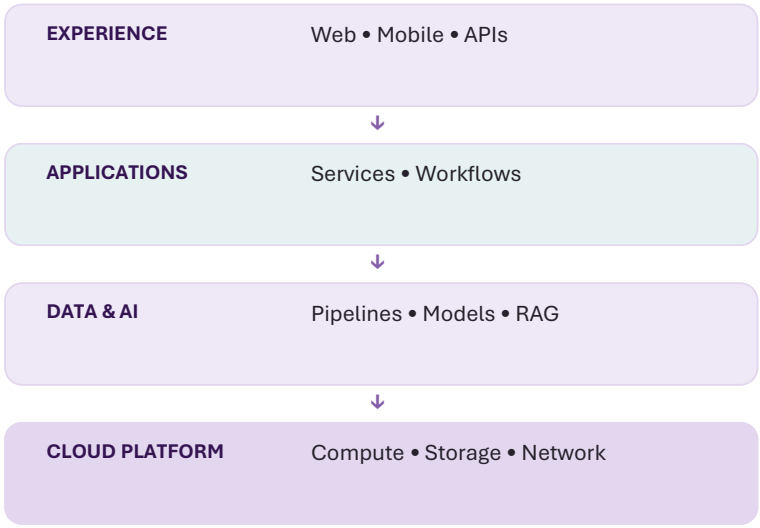

Architecture reviews, solution design, technical assessments and delivery planning.

Build resilient, scalable digital foundations

Cloud-native engineering focused on secure architecture, operational readiness and sustainable growth.

CORE CAPABILITIES

- Cloud solution architecture across AWS, Microsoft Azure and Google Cloud
- Microservices, API-first design and event-driven systems
- Containerisation, Kubernetes-ready platforms and deployment automation
- Infrastructure as Code, CI/CD, monitoring and observability
- Performance, scalability, availability and cost-aware design

Turn data and AI into useful business capability

From data foundations to AI-assisted workflows, we focus on solutions that fit operational needs.

DATA ENGINEERING

- Data ingestion and transformation
- Pipeline design
- Data integration
- Analytics-ready platforms

GENERATIVE AI

- LLM and model integration
- Retrieval-Augmented Generation
- Enterprise knowledge assistants
- Prompt and response workflows

INTELLIGENT AUTOMATION

- Workflow automation
- AI-enabled business processes
- Document processing
- Human-in-the-loop patterns

SOLUTION PATTERNS

Knowledge assistant • Semantic search • AI-powered support • Data quality workflows • Process automation

A modern, integration-friendly technology stack

Technology choices are aligned to client standards, delivery constraints and long-term maintainability.

BACKEND

Java • Spring Boot • Node.js • Python

FRONTEND & MOBILE

React • React Native • TypeScript

CLOUD & PLATFORM

AWS • Azure • Google Cloud • Docker • Kubernetes

DATA & MESSAGING

PostgreSQL • MongoDB • DynamoDB • Redis • Kafka

AI & AUTOMATION

LLM APIs • RAG • Vector search • Workflow automation

ENGINEERING PRACTICES

REST APIs • Microservices • CI/CD • IaC • Testing

Technology stack is illustrative, not restrictive. We can align with your approved platforms and toolchain.

Flexible ways to work together

Choose the engagement structure that best supports your project, team and procurement model.

Project-based delivery

Defined scope, milestones, deliverables and acceptance criteria.

Dedicated engineering

Ongoing engineering capacity aligned to your backlog and ways of working.

Staff augmentation

Specialist engineers integrated into your delivery team and governance.

Subcontracting partnership

White-label or partner-led delivery support under mutually agreed terms.

A clear, collaborative delivery lifecycle

A lightweight structure keeps expectations visible from discovery through dependable delivery.

TRANSPARENCY • ENGINEERING QUALITY • COLLABORATION • CONTINUOUS IMPROVEMENT

09 / QUALITY & GOVERNANCE

Built with quality, security and ownership in mind

We align delivery practices with client policies, architecture standards and applicable requirements.

Engineering quality

Code reviews, automated testing, maintainable design and documented decisions.

Security awareness

Secure development practices, access discipline and careful data handling.

Delivery visibility

Clear work tracking, regular communication, risks and dependency management.

Operational readiness

Logging, monitoring, deployment documentation and support handover.

Certifications, service levels and compliance commitments can be discussed and documented for each engagement.

10 / LET'S COLLABORATE

Let's build what comes next.

Share your business challenge, delivery need or technology roadmap. We'll shape a practical engagement together.

Need delivery capacity?

Add engineering bandwidth to your team.

Modernising a platform?

Plan and execute cloud-native evolution.

Exploring AI opportunities?

Identify focused, valuable use cases.
