Your Engineering Delivery Partner

A flexible subcontracting model for IT services and consulting companies

SkyNetix Systems LLP collaborates with technology service providers to extend delivery capacity, execute defined work packages and support client projects.

Project Delivery

Defined scope, milestones and acceptance criteria for application modules or complete solutions.

Engineering Capacity

Dedicated developers or specialist support aligned to the agreed project requirements.

Partner Collaboration

Clear communication, agreed ways of working and delivery coordination with the prime contractor.

Positioning: a technology subcontractor and software delivery partner—not just a CV supplier.

Core Technology Capabilities

Focus areas for project-based delivery and specialist engineering support

Java Backend Engineering

Java • Spring Boot • REST APIs
Microservices • Kafka / event-driven systems
Enterprise application development

React & Full Stack

React web applications
Java + React integration
Feature development and application enhancement

Cloud & DevOps

AWS cloud-native applications
CI/CD and deployment automation
Reliability, scalability and modernization

Architecture & Technical Consulting

Solution design • API strategy • Integration patterns • Performance and maintainability

Application Support & Enhancement

Bug fixes • Technical debt reduction • Production support • Incremental delivery

Capabilities and staffing are confirmed against each engagement before commitments are made.

Flexible Engagement Models

Choose the collaboration model that fits the prime contractor and end-client need

01 Project-Based Delivery

Best for:
• A defined feature, module or application
• Milestone-based execution
• Clear scope and acceptance criteria

Commercials: fixed-price or milestone-based, where scope allows.

02 Dedicated Team

Best for:
• Ongoing product development
• Backlog delivery and enhancements
• Flexible engineering capacity

Commercials: monthly team or resource rates.

03 Specialist Support

Best for:
• Java / Spring Boot expertise
• Architecture and integration tasks
• Short-term delivery bottlenecks

Commercials: agreed hourly, daily or monthly rates.

White-label delivery can be considered where explicitly agreed with the contracting partner and end client.

A Structured Delivery Approach

A practical operating model designed to reduce ambiguity and improve coordination

01

Discover

Understand scope, constraints, stakeholders and success criteria.

02

Plan

Confirm estimates, milestones, responsibilities and dependencies.

03

Build

Develop in agreed iterations with code reviews and version control.

04

Validate

Test functionality, integration and agreed non-functional requirements.

05

Handover

Provide documentation, deployment notes and agreed knowledge transfer.

Governance can include agreed status updates, issue escalation, quality checks and change control.

Why Collaborate with SkyNetix Systems?

A partner-oriented approach to delivery, communication and engineering

Delivery flexibility

Project packages, dedicated capacity or specialist support.

Technical focus

Backend, full-stack and cloud engineering capabilities.

Clear ownership

Agreed deliverables, responsibilities and escalation paths.

Quality practices

Code reviews, testing and documentation aligned to project needs.

Commercial transparency

Defined scope, assumptions, rates and invoicing terms.

Confidentiality

NDA, IP and access requirements agreed before work begins.

Commercial & Operational Readiness

Set expectations clearly before project kickoff

Engagement Setup

- Scope, deliverables and exclusions
- Delivery timeline and dependencies
- Roles, communication and reporting
- Testing and acceptance criteria
- Change requests and escalation

Vendor Onboarding

- Company registration and tax documents
- NDA and subcontracting agreement
- Invoicing and payment schedule
- IP ownership and confidentiality terms
- Security, access and compliance requirements

Documents are shared as applicable and subject to the prime contractor's onboarding requirements.

Enterprise Java & Backend Engineering

Build secure, maintainable services that support business-critical applications.

Java & Spring Ecosystem

- Java (modern versions)
- Spring Boot and Spring ecosystem
- REST APIs and service integration

Microservices

- Domain-oriented service design
- Resilience, retries and timeouts
- API versioning and error handling

Data & Messaging

- SQL and NoSQL integration
- Kafka-based event-driven systems
- Caching and asynchronous workflows

Ways we can support your delivery team

- Develop new services, APIs and integrations
- Modernize legacy Java applications and improve maintainability
- Contribute senior engineering expertise to existing client projects

SKYNETIX SYSTEMS LLP

Cloud-Native Engineering & DevOps

Design and deliver services with deployment, reliability and operational needs in mind.

Cloud Platforms

- AWS, Azure and GCP solution support
- Cloud service integration
- Environment and configuration planning

Containers & Delivery

- Docker and Kubernetes-oriented delivery
- CI/CD pipeline collaboration
- Infrastructure as Code concepts

Reliability & Operations

- Logging, metrics and tracing
- Health checks and alerting readiness
- Performance and cost awareness

Delivery outcomes we aim for

- Repeatable releases with fewer manual steps
- Services designed for observability and operational support
- Practical cloud architecture aligned to security, scale and cost

SKYNETIX SYSTEMS LLP

Solution Architecture & Application Modernization

Turn requirements and constraints into implementable technical designs.

Architecture & Design

• Solution decomposition and service boundaries
• API and integration design
• Architecture decision records and diagrams

Modernization

• Legacy application assessment
• Monolith-to-services transition planning
• Incremental refactoring strategies

Engineering Quality

• Code reviews and design reviews
• Secure coding and maintainability
• Technical debt prioritization

How we help clients and prime vendors

- Provide architecture input during discovery, estimation and delivery
- Translate non-functional requirements into technical implementation plans
- Help teams reduce complexity without disrupting ongoing business

SkyNetix Systems

SKYNETIX SYSTEMS LLP

Full-Stack Delivery & Systems Integration

Flexible engineering support across application layers and enterprise interfaces.

Application Development

- Backend-first full-stack delivery
- React and web application integration
- Frontend/backend API contracts

Enterprise Integration

- Third-party API integrations
- Authentication and authorization flows
- Data exchange and transformation

Testing & Release Support

- Unit and integration testing
- Defect analysis and resolution
- Release coordination with client teams

Engagement examples

- Take ownership of defined API or integration workstreams
- Augment existing teams during delivery peaks or modernization programs
- Support production issues, bug fixes and technical enhancements

SkyNetix Systems

SKYNETIX SYSTEMS LLP

Applied AI & GenAI Engineering

Practical AI integration for enterprise workflows, with attention to data and governance.

LLM Application Patterns

- Retrieval-Augmented Generation (RAG)
- Prompt design and evaluation
- Knowledge assistant workflows

Enterprise Integration

- Java/Python service integration
- Model API and cloud AI integration
- Secure access to enterprise knowledge

Responsible Delivery

- Grounding and output validation
- Privacy and access-control considerations
- Human review for sensitive use cases

Potential project support

- Prototype an internal knowledge assistant or document Q&A workflow
- Connect AI capabilities to existing enterprise APIs and systems
- Help teams evaluate quality, latency, cost and operational risks

Quality Engineering, Support & Delivery Assurance

Help teams ship with confidence and sustain applications after release.

Quality Practices

- Unit and integration test strategy
- Regression and defect triage
- Code quality and peer review

Production Support

- Root-cause analysis
- Incident and problem investigation
- Performance bottleneck analysis

Delivery Governance

- Clear scope and acceptance criteria
- Sprint-level progress visibility
- Documentation and handover

What clients can expect

- Defined deliverables and transparent progress reporting
- Collaborative work with the client’s existing standards and tools
- Knowledge transfer and support documentation at agreed milestones

SKYNETIX SYSTEMS LLP

Built for Subcontracting & Delivery Partnerships

A flexible extension of your delivery capability—aligned to your client commitments.

Team Augmentation

Add Java, cloud or architecture skills to an existing team for a defined period.

Work-Package Delivery

Own a clearly scoped component, API set, integration or modernization workstream.

Specialist Advisory

Bring in senior technical input for architecture reviews, design decisions and delivery risks.

Partnership principles

- Respect prime-vendor and end-client processes, confidentiality and communication channels
- Agree scope, ownership, milestones and acceptance criteria up front
- Scale the engagement to the project’s needs and agreed commercial model
