COMPANY INTRODUCTION

Who We Are

SmartSoftwareServicesPvt.Ltd.isan India-based software and IT consulting company. We combine skilled developers, engineers and designers to build custom software products and services for clients.

Our purpose is straightforward: help organisations use technology to improve productivity, streamline operations, enhance customer experience and move confidently through digital transformation.

From web and application development to cloud, data, AI/ML, UI/UX design and long-term technical support, we work across the full lifecycle of a digital solution. Our approach is collaborative, security-conscious and focused on reliability.

End-to-End Delivery

Fromidea anddesign todevelopment, launch and support, all under one roof.

Skilled, Certified Team

Developers,engineers anddesigners with hands-on experience across modern technologies.

Security-First Approach

Secure coding, data protection, and best practices built into every project.

Transparent Process

Clear timelines, regular updates and honest communication at every stage.

PURPOSE & PRINCIPLES

Our Vision, Mission & Values

OUR VISION

To transform the digital landscape through innovative software solutions that change how individuals and organisations engage with technology — fostering efficiency, empowerment and sustainable growth.

OUR MISSION

To empower businesses through secure, reliable and innovative software that improves productivity, streamlines processes and drives digital transformation — with customer satisfaction at its core.

OUR VALUES

Innovation
Newideas,practical results. Always looking for a smarter way.

Integrity
Zero compromise on honesty. Clear communication, no hidden surprises.

Customer Satisfaction
Client success isour success. Every project, every time.

Collaboration
Your goals become our goals. We work as one team.

Excellence
Qualityin every line of code, on time and done right.

Adaptability
Quick to learn,quick to adapt, ready for what's next.

SERVICES WE PROVIDE

Our Services

Software Development
Customapplicationsdesigned around your workflows.

OUTCOME

Systems that fit how your business operates.

Web Development
Responsive,secure andmaintainable websites and web platforms.

OUTCOME

A dependable digital presence.

Mobile Application Development
Native and cross-platform apps for business and customer needs.

OUTCOME

Services in your users' hands.

Cloud Solutions
Migration, infrastructure design, deployment and cloud security.

OUTCOME

Scalable, resilient infrastructure.

Data Analytics
Processingandanalysing data for actionable insight.

OUTCOME

Better-informed decisions.

AI & Machine Learning
Practical AI/ML models and intelligent automation

OUTCOME

Smarter, more automated operations.

Generative AI
LLM-poweredassistants, content tools and workflow automation.

OUTCOME

Faster work with AI built in.

Cybersecurity
Securityassessments, data protection and threat monitoring.

OUTCOME

Systems and data kept safe.

IT Consulting
Technologyguidance aligned to business goals.

OUTCOME

Clear roadmaps and sound choices.

Application Support & Maintenance
Monitoring, fixes, updates and enhancements after launch.

OUTCOME

Long-term reliability.

QA & Testing
Manualandautomated testing for quality releases.

OUTCOME

Fewer bugs, smoother launches.

Digital Transformation
Modernisingprocessesandsystems with the right technology.

OUTCOME

A future-ready business.

TECHNOLOGY EXPERTISE

Our Technology Stack

Programming

Java | Python | JavaScript | C# | .NET

Frontend

React | Angular | HTML | CSS | Next.js | Tailwind CSS | Material UI

Backend

Node.js | Spring Boot | .NET | Python | NestJS

Database

Oracle | MySQL | PostgreSQL | MongoDB | Vector DB

Cloud & DevOps

AWS | Azure | Docker | Kubernetes | Jenkins | Git

AI & Data Services

Artificial Intelligence | Machine Learning | Deep Learning | NLP | Generative AI | RAG | LLM Applications | Data Analytics | Data Engineering | Predictive Analytics

INDUSTRIES WE SERVE

Industry Solutions

Banking & Financial Services

Secure platforms for banking , payments and lending.

IMPACT

Faster, compliant financial operations.

Healthcare

Delivering innovative digital solutions tailored to the evolving needs of the US healthcare industry.

Insurance

Policyadministration, claims and customer portals.

IMPACT

Quicker claims, happier customers.

Retail & E-commerce

Online stores, inventory and customer analytics.

IMPACT

More sales across every channel.

Manufacturing

ERPintegration,automation and production analytics.

IMPACT

Efficient, data-driven production.

Education

Learningplatforms, student portals and EdTech apps.

IMPACT

Engaging digital learning.

Logistics & Supply Chain

Tracking, fleet and warehouse management systems.

IMPACT

Visible, on-time operations.

Telecom

OSS/BSS systems, customer apps and network analytics.

IMPACT

Reliable, scalable services.

CASE STUDIES

Featured Projects

01

Banking & Financial Services

Digital Lending Platform

End-to-endloanapplication,approval and disbursement system with role-based dashboards.

Java | Spring Boot | React | PostgreSQL

RESULT

Faster approvals with complete audit trails.

02

Healthcare

Patient Management Portal

Appointmentbooking, digitalhealthrecords and doctor dashboards in one secure portal.

.NET | Angular | MySQL | Azure

RESULT

Less paperwork, smoother patient visits.

03

Retail & E-commerce

E-commerce Platform & App

Online storewithinventory sync,securepayments and a companion mobile app.

Node.js | React | MongoDB | AWS

RESULT

Sales across web and mobile channels.

04

Insurance

AI Policy Assistant

RAG-based assistantthat reads policy documents and answers staff queries instantly.

Python | Generative AI | RAG | Azure

RESULT

Quicker answers, less manual searching.

05

Logistics & Supply Chain

Fleet Tracking & Analytics

Real-timevehicle trackingwithrouteplanning and delivery analytics dashboards.

Python | PostgreSQL | Docker | AWS

RESULT

Clear visibility of every delivery.

06

Manufacturing

Cloud Migration & DevOps

Movedon-premise ERPworkloadstothe cloud with automated CI/CD pipelines.

AWS | Kubernetes | Jenkins | Git

RESULT

Scalable systems and faster releases.

TESTIMONIALS

What Our Clients Say

web development

"Smart Software Services understood our requirements from day one and delivered a solution that fits exactly how our business runs. Their team was responsive, transparent and genuinely invested in our success.

CN **Book My Parcel**

SOFTWARE DEVELOPMENT

Cloud Solutions

The cloud migration was planned carefully and completed with minimal downtime. Our systems are now faster, more secure and far easier to scale as we grow.

CF **Career Flow**

AI & Machine Learning

Their AI team turned a manual, time-consuming process into an automated workflow. We now make decisions faster with data we can actually trust.

RG **Review Generator**

Web & Mobile Development

From design to launch, the team kept us informed at every step. The app our customers use today is clean, reliable and easy to update.

KS **Kunbi Samaj**

Web Devlopment

Smart Software Services delivered a modern, user-friendly website that perfectly matched our business needs. Their professionalism and attention to detail made the entire process smooth.

RG **Radhe Group**

SOLUTIONS

Solutions by Business Need

DIGITAL TRANSFORMATION

PROBLEM
Legacy processes and systems slow the business down.
SOLUTION
Modernise workflows and platforms with purpose-built software.
OUTCOME

A more agile, connected organisation.

BUSINESS AUTOMATION

PROBLEM
Repetitive manual work consumes time and invites errors.
SOLUTION
Automate workflows and integrate systems.
OUTCOME

Less manual effort, more consistency.

CUSTOMER EXPERIENCE

PROBLEM
Customers expect fast, simple digital interactions.
SOLUTION
Design and build customer-facing web and mobile platforms.
OUTCOME
Better engagement and satisfaction.

DATA & DECISION MAKING

PROBLEM
Valuable data sits unused or scattered.
SOLUTION

Process, analyse and visualise data for decision support.
OUTCOME

Insights leaders can act on.

CLOUD MODERNIZATION

PROBLEM
Infrastructure that cannot scale or adapt.
SOLUTION
Migrate and build on scalable, secure cloud environments.
OUTCOME

Flexibility, resilience and scalability.

INTELLIGENT APPLICATIONS

PROBLEM
Teams need smarter tools within existing processes.
SOLUTION

Integrate AI/ML into practical business workflows.
OUTCOME

Smarter operations and decisions.

PROCESS

From Requirement to Real-World Solution

01

Discover
Understandthe business requirement.

02

Define
Translaterequirements into technical and functional specifications.

03

Design
Createarchitecture, UX and solution design.

04

Develop
Build,integrate and test the solution.

05

Deploy
Releasethe solution into the target environment.

06

Support & Scale
Monitor,maintain,optimise and evolve the system.

"Our focus is not simply to build software, but to build solutions that create measurable business value."

SUMMARY

One Technology Partner. Multiple Digital Capabilities.

01

Software

Custom applications built around your workflows.

02

Cloud

Migration, deployment and secure infrastructure.

03

AI / ML

Practical modelsand intelligent automation.

04

Data

Analytics and insight forbetterdecisions.

05

Web

Responsive, secure websites and platforms.

06

Digital

Modernising processes with the right technology.

07

Design

UI/UX that peoplefind simple to use.

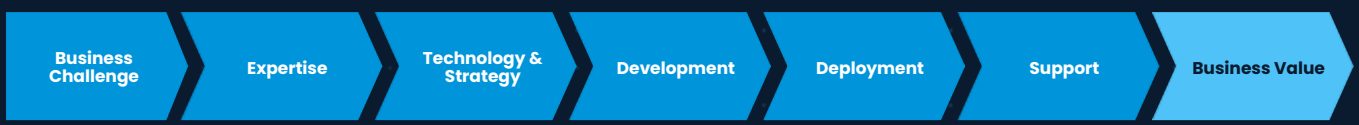

08

Support

Monitoring, fixesand long-term reliability.

Smart Software Services can support organisations across multiple stages of their technology journey — from digital product development through deployment, maintenance and modernisation — so clients work with one partner instead of coordinating many.

Building Tomorrow’s Technology, Today.

SKYNETIX

SYSTEMS LLP

Technology Subcontracting & Software Delivery Partner

Java • Spring Boot • React • Microservices • Cloud Engineering

Company Capability Overview

A subsidiary of Smart Software Service

Parent company: smartsoftwareservice.com

PARTNER WITH CONFIDENCE

SkyNetix Systems
Cloud · Data Science · AI
SKYNETIX SYSTEMS LLP

https://skynetixsystems.com/

Your Engineering Delivery Partner

A flexible subcontracting model for IT services and consulting companies

SkyNetix Systems LLP collaborates with technology service providers to extend delivery capacity, execute defined work packages and support client projects.

Project Delivery

Defined scope, milestones and acceptance criteria for application modules or complete solutions.

Engineering Capacity

Dedicated developers or specialist support aligned to the agreed project requirements.

Partner Collaboration

Clear communication, agreed ways of working and delivery coordination with the prime contractor.

Positioning: a technology subcontractor and software delivery partner—not just a CV supplier.

Core Technology Capabilities

Focus areas for project-based delivery and specialist engineering support

Java Backend Engineering

Java • Spring Boot • REST APIs
Microservices • Kafka / event-driven systems
Enterprise application development

React & Full Stack

React web applications
Java + React integration
Feature development and application enhancement

Cloud & DevOps

AWS cloud-native applications
CI/CD and deployment automation
Reliability, scalability and modernization

Architecture & Technical Consulting

Solution design • API strategy • Integration patterns • Performance and maintainability

Application Support & Enhancement

Bug fixes • Technical debt reduction • Production support • Incremental delivery

Capabilities and staffing are confirmed against each engagement before commitments are made.

Flexible Engagement Models

Choose the collaboration model that fits the prime contractor and end-client need

01 Project-Based Delivery

Best for:
• A defined feature, module or application
• Milestone-based execution
• Clear scope and acceptance criteria

Commercials: fixed-price or milestone-based, where scope allows.

02 Dedicated Team

Best for:
• Ongoing product development
• Backlog delivery and enhancements
• Flexible engineering capacity

Commercials: monthly team or resource rates.

03 Specialist Support

Best for:
• Java / Spring Boot expertise
• Architecture and integration tasks
• Short-term delivery bottlenecks

Commercials: agreed hourly, daily or monthly rates.

White-label delivery can be considered where explicitly agreed with the contracting partner and end client.

SkyNetix Systems
Cloud · Data Science · AI
SKYNETIX SYSTEMS LLP

A Structured Delivery Approach

A practical operating model designed to reduce ambiguity and improve coordination

01

Discover

Understand scope, constraints, stakeholders and success criteria.

02

Plan

Confirm estimates, milestones, responsibilities and dependencies.

03

Build

Develop in agreed iterations with code reviews and version control.

04

Validate

Test functionality, integration and agreed non-functional requirements.

05

Handover

Provide documentation, deployment notes and agreed knowledge transfer.

Governance can include agreed status updates, issue escalation, quality checks and change control.

Why Collaborate with SkyNetix Systems?

A partner-oriented approach to delivery, communication and engineering

Delivery flexibility

Project packages, dedicated capacity or specialist support.

Technical focus

Backend, full-stack and cloud engineering capabilities.

Clear ownership

Agreed deliverables, responsibilities and escalation paths.

Quality practices

Code reviews, testing and documentation aligned to project needs.

Commercial transparency

Defined scope, assumptions, rates and invoicing terms.

Confidentiality

NDA, IP and access requirements agreed before work begins.

Commercial & Operational Readiness

Set expectations clearly before project kickoff

Engagement Setup

- Scope, deliverables and exclusions
- Delivery timeline and dependencies
- Roles, communication and reporting
- Testing and acceptance criteria
- Change requests and escalation

Vendor Onboarding

- Company registration and tax documents
- NDA and subcontracting agreement
- Invoicing and payment schedule
- IP ownership and confidentiality terms
- Security, access and compliance requirements

Documents are shared as applicable and subject to the prime contractor's onboarding requirements.

Enterprise Java & Backend Engineering

Build secure, maintainable services that support business-critical applications.

Java & Spring Ecosystem

- Java (modern versions)
- Spring Boot and Spring ecosystem
- REST APIs and service integration

Microservices

- Domain-oriented service design
- Resilience, retries and timeouts
- API versioning and error handling

Data & Messaging

- SQL and NoSQL integration
- Kafka-based event-driven systems
- Caching and asynchronous workflows

Ways we can support your delivery team

- Develop new services, APIs and integrations
- Modernize legacy Java applications and improve maintainability
- Contribute senior engineering expertise to existing client projects

SkyNetix Systems
Cloud · Data Science · AI
SKYNETIX SYSTEMS LLP

Cloud-Native Engineering & DevOps

Design and deliver services with deployment, reliability and operational needs in mind.

Cloud Platforms

- AWS, Azure and GCP solution support
- Cloud service integration
- Environment and configuration planning

Containers & Delivery

- Docker and Kubernetes-oriented delivery
- CI/CD pipeline collaboration
- Infrastructure as Code concepts

Reliability & Operations

- Logging, metrics and tracing
- Health checks and alerting readiness
- Performance and cost awareness

Delivery outcomes we aim for

- Repeatable releases with fewer manual steps
- Services designed for observability and operational support
- Practical cloud architecture aligned to security, scale and cost

SkyNetix Systems
Cloud · Data Science · AI
SKYNETIX SYSTEMS LLP

Solution Architecture & Application Modernization

Turn requirements and constraints into implementable technical designs.

Architecture & Design

• Solution decomposition and service boundaries
• API and integration design
• Architecture decision records and diagrams

Modernization

• Legacy application assessment
• Monolith-to-services transition planning
• Incremental refactoring strategies

Engineering Quality

• Code reviews and design reviews
• Secure coding and maintainability
• Technical debt prioritization

How we help clients and prime vendors

- Provide architecture input during discovery, estimation and delivery
- Translate non-functional requirements into technical implementation plans
- Help teams reduce complexity without disrupting ongoing business

SkyNetix Systems
Cloud · Data Science · AI
SKYNETIX SYSTEMS LLP

Full-Stack Delivery & Systems Integration

Flexible engineering support across application layers and enterprise interfaces.

Application Development

- Backend-first full-stack delivery
- React and web application integration
- Frontend/backend API contracts

Enterprise Integration

- Third-party API integrations
- Authentication and authorization flows
- Data exchange and transformation

Testing & Release Support

- Unit and integration testing
- Defect analysis and resolution
- Release coordination with client teams

Engagement examples

- Take ownership of defined API or integration workstreams
- Augment existing teams during delivery peaks or modernization programs
- Support production issues, bug fixes and technical enhancements

SkyNetix Systems
Cloud · Data Science · AI
SKYNETIX SYSTEMS LLP

Applied AI & GenAI Engineering

Practical AI integration for enterprise workflows, with attention to data and governance.

LLM Application Patterns

- Retrieval-Augmented Generation (RAG)
- Prompt design and evaluation
- Knowledge assistant workflows

Enterprise Integration

- Java/Python service integration
- Model API and cloud AI integration
- Secure access to enterprise knowledge

Responsible Delivery

- Grounding and output validation
- Privacy and access-control considerations
- Human review for sensitive use cases

Potential project support

- Prototype an internal knowledge assistant or document Q&A workflow
- Connect AI capabilities to existing enterprise APIs and systems
- Help teams evaluate quality, latency, cost and operational risks

Quality Engineering, Support & Delivery Assurance

Help teams ship with confidence and sustain applications after release.

Quality Practices

- Unit and integration test strategy
- Regression and defect triage
- Code quality and peer review

Production Support

- Root-cause analysis
- Incident and problem investigation
- Performance bottleneck analysis

Delivery Governance

- Clear scope and acceptance criteria
- Sprint-level progress visibility
- Documentation and handover

What clients can expect

- Defined deliverables and transparent progress reporting
- Collaborative work with the client’s existing standards and tools
- Knowledge transfer and support documentation at agreed milestones

SkyNetix Systems
Cloud · Data Science · AI
SKYNETIX SYSTEMS LLP

Built for Subcontracting & Delivery Partnerships

A flexible extension of your delivery capability—aligned to your client commitments.

Team Augmentation

Add Java, cloud or architecture skills to an existing team for a defined period.

Work-Package Delivery

Own a clearly scoped component, API set, integration or modernization workstream.

Specialist Advisory

Bring in senior technical input for architecture reviews, design decisions and delivery risks.

Partnership principles

- Respect prime-vendor and end-client processes, confidentiality and communication channels
- Agree scope, ownership, milestones and acceptance criteria up front
- Scale the engagement to the project’s needs and agreed commercial model

SkyNetix Systems
